Harrier Chest Harnesses

H0078 & H0078PL

The Harrier Chest Harness & Harrier Chest Plus Harness are a new design to accompany the Harrier sit harness range. Made using high grade polyester webbing and the shoulders are padded with high grade closed cell foam.

This harness utilises a triple action karabiner on the front to attach to the Harrier Sit Harness. The Harrier Chest Plus has a sewn in ascender and connects to the front of the sit harness with a maillon. Both of these harnesses can be threaded into the back of the Harrier Sit Harness models meaning they can be permanently attached or replaced if damaged in anyway.

Both models of Harrier have a quick clip buckle on the shoulder to allow faster donning or removal. This harness must NOT be used on it's own.
