

Product Data Sheet

Spec Chest Harnesses

H0091 & H0091ASC

The Spec Chest and the Spec Chest Ascent were developed in tandem with the Spec Sit Harness to give capability for a full body harness to be created.

Both chest harnesses are threaded onto the Spec Sit via the attachment buckle on the rear of the waist belt, and can be left permanently attached or can be removed if required. The Spec Chest has a triple lock karabiner for the front attachment, whilst the Spec Chest Ascent is connected via the sewn-in ascender using the supplied maillon.

Both Spec Chest harnesses conform to the new defence material standard for helicopter use.

Specs:

- Rated to 150kg
- Front sternal and rear dorsal 'D's
- High grade polyester

Weight & Sizing:

- Spec Chest: 608g
- Spec Chest Ascent: 758g
