

Product Data Sheet

Rope & Cord Sewn Eye

RR015 & RR015T

Our Sewn (stitched) Eye termination provides a compact, low-profile alternative to knots, creating a neat and secure attachment point whilst maintaining excellent strength and usability.

Available on selected ropes and cords within our range, including 6mm, 8mm, 10.5mm and 11mm diameters, sewn terminations are ideal for applications within arboriculture, rope rescue, mountain rescue, rope access and work at height environments.

The stitch block is protected by a durable transparent sheath to help minimise abrasion and reduce the ingress of dirt and debris. Standard rope eyes can also be supplied with a thimble where additional protection is required.

All sewn terminations are individually identified and marked with a unique serial number, rope length, rope diameter and year of manufacture for traceability.

Specs:

- Minimum Breaking Strength: $\geq 22\text{kN}$ depending on rope / cord type
- For compatibility with specific ropes, cords or custom configurations, please contact us
- Individual serial number
